

Ecology and life

At **Hidrosalud** we believe that ecology and life go hand in hand. We show that thanks to responsible water consumption we make the product cheaper since we eliminate accessory elements of the water, such as transport or sanitization and sanitation processes.

Being water of Km0, we implement water savings, being our *Ecological System Water* the most efficient in the market.

Slim has a 500 gallon membrane, which performs minimal water rejection relative to others. Exactly three times less than conventional equipment.

If we add health to saving and caring for the environment, we have the perfect product: *perfect*

with **Conventional Osmosis**

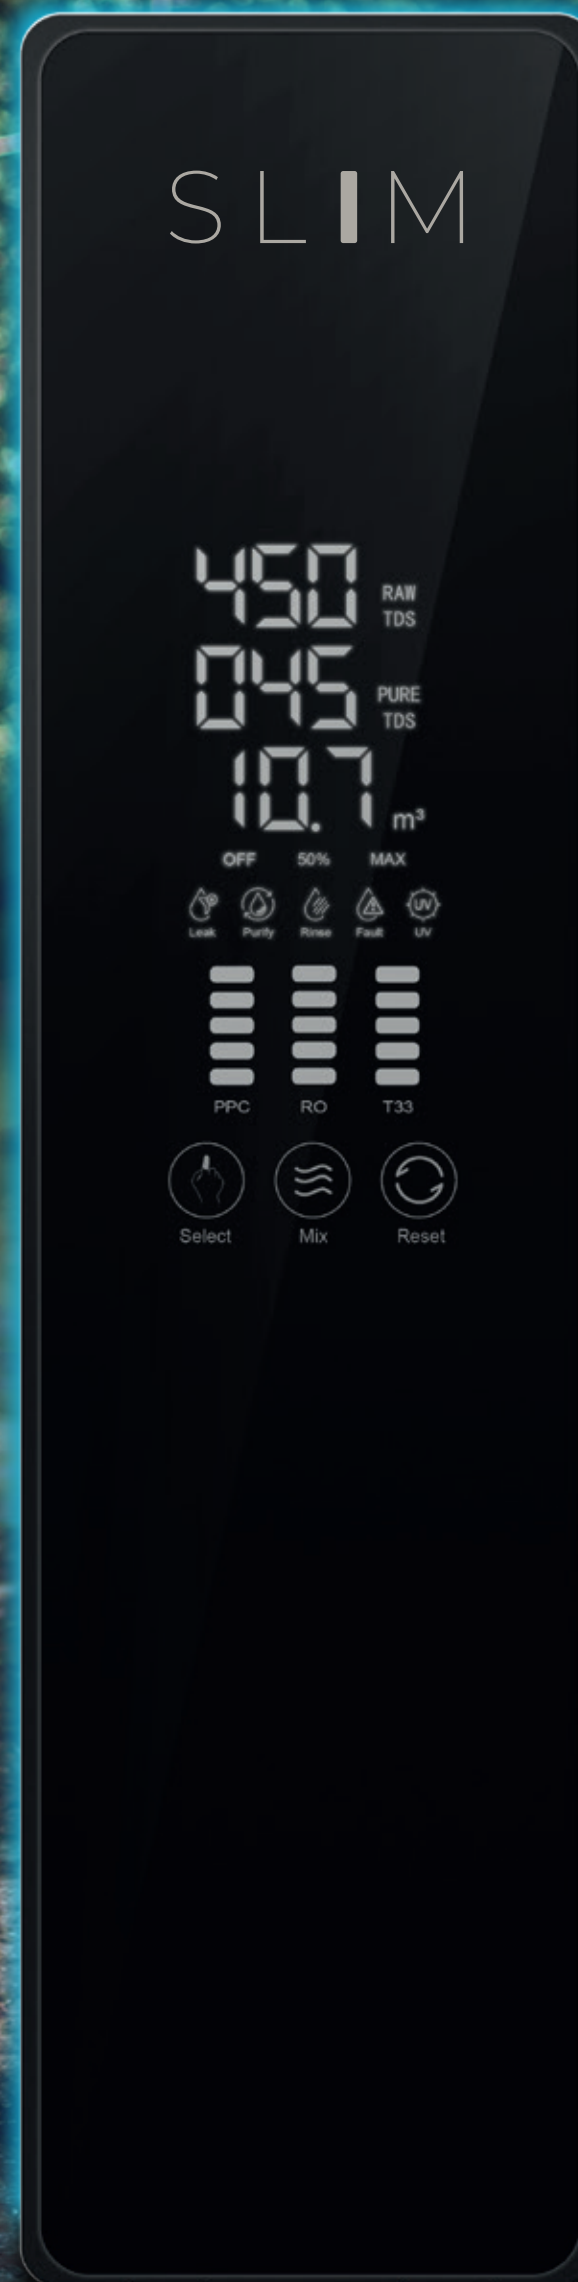

with **Slim**

1 liter produced
3 liters rejected

1 liter produced
0.7 liters rejected

FAMILY SAVINGS TABLE

Nº Users	Total consumption Mineral water (l/d)	Mineral water Total consumption for Kitchen (l/d)	Total consumption House (l/d)	Mineral Water Cost / Savings with Hidrosalud System (€/year)
2	4	1,5	5,5	1006,5
3	6	2,5	7,5	1372,5
4	8	3,5	11,5	1738,5
5	10	4,5	14,5	2104,5
6	12	5,5	17,5	2470,5
7	14	6,5	20,5	2836,5
8	16	7,5	23,5	3202,5

10	20	9,5	29,5	3934,5

Healthy water of the highest quality

It produces water of **low or medium mineralization**, free of physical, plastic, chemical and bacteriological residues. It is of excellent flavor and ideal for drinking or cooking.

Aquastop

Virgin incorporates a water leak detector to automatically block the equipment in the event of a water leak

Automatic cleaning system

The **Virgin** equipment automatically cleans the membrane with clean water every 24 hours, thus achieving optimum equipment performance, preventing fouling and prolonging the useful life of the membrane.

Water quality detector

The *Sistema Inteligente Purify* incorporates a digital meter of the quality of the water as it is purified and filtered.

High Efficiency Direct Flow

Virgin achieves a water production of 1.4 liters per minute. The water is produced instantly and, as it is not accumulated, it is a safe water since it prevents the proliferation of bacteria and viruses.

Digital screen

It has a very intuitive display that represents all the functions and water quality. It also warns you of the state of the filters.

Faucet with two options of Water

The tap has two positions, one for medium mineralization and one for weak mineralization.

Water Choice System®

Water Choice System® means that you can choose the water flavor that best suits your palate by pressing the "Mix" sensor. Water mixing system

Powered by **hidrosalu**
CUIDAMOS EL AGUA

CHASSIS MATERIAL:
Black Steel

Water on demand

The *Water Choice System*® It is a water mixing system that makes it possible to drink water of various flavors according to the increase in minerals, ranging from water with medium mineralization to water with very weak mineralization.

Light Sensor

It has an integrated ring with LED light that warns of the status of the filters.

Stainless Steel Faucet

Filter Status Detector

The bars mark the status of each filter, having to change them when there is only one left.

PRODUCTION 2,2 L/min.

Three Filtration Stages

The *Intelligent Purify System*® has three water purification stations, providing virgin water, like spring water.

1st Station

In this station we eliminate sediments, chemical contaminants and chlorine.

2nd Station

The RO membrane eliminates excess solids, salts, dry residue, heavy metals and microbiological contamination.

3rd Station

Alkalizes the water by regulating the percentage of minerals, balancing the optimal PH for health.

Narrow and Compact

It can be placed horizontally or vertically given its narrowness for the most avant-garde kitchens.
